Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-10, drawn to an apparatus for defining a computer definition, classified in class 700, subclass 121.
- II. Claims 11-18, drawn to a mask, classified in class 430, subclass 5.
- III. Claims 19-34, drawn to a method of manufacturing an integrated circuit, classified in class 430, subclass 311.

The inventions are distinct, each from the other because:

Inventions I and II, III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are different components of a general manufacturing process for making integrated circuits.

Inventions II and III are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the mask could be used to make a different product such as an integrated circuit that does not require shifter shapes at feature edges.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, and recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
